Coronary Plaque Regression and Compositional Changes by  
Lipid-Lowering Therapy: IVUS Substudy in Livalo®  
(Pitavastatin) in Acute Myocardial Infarction Study (LAMIS)

**Livalo Acute Myocardial Infarction Study (LAMIS) Group :**  
**Young Joon Hong, Myung Ho Jeong, Youngkeun Ahn, Tae Hoon Ahn, Jang Ho Bae,**  
**Seung Ho Hur, Seung Woon Rha, Kee Sik Kim, In Ho Chae,**  
**Jong Hyun Kim, Kyeong Ho Yun, Sang Wook Kim**

# Plaque Regression by Statin

- **Atherosclerosis is usually viewed as a chronic progressive disease characterized by continuous accumulation of atheroma within the arterial wall.**
- **Intravascular ultrasound (IVUS) has emerged as the most sensitive and reliable measure of the progression of coronary disease.**
- **Prior angiographic and IVUS trials have shown reduced progression of coronary atherosclerosis with statin therapy.**

# Lipid Lowering and Plaque Regression: Monotherapy Studies

| Study      | Treatment group |  | LDL-C | $\Delta\%$ Stenosis<br>( <i>P</i> ) | % Event<br>reduction |

## Absolute Plaque Component

# Changes of VH-IVUS Parameters From Baseline to FU (Mean 7.7 Months)

# Conclusion – IVUS Study in LAMIS

- **Usual dose of pitavastatin (2mg/day) decreased LDL-C and CRP levels effectively**
- **It had some effect on plaque regression and compositional change in non-culprit, non-intervened segments in AMI patients.**
- **With more intensive dose of statin, plaque regression and plaque compositional change probably could be more rapidly achieved.**

**Intensive lipid-lowering therapy**

# Future Perspectives in LAMIS

- **More long-term follow-up data**
- **High dose Livalo (4mg)**
- **More IVUS and VH-IVUS follow-up data**
  - **Plaque regression**
  - **Plaque compositional change**
- **Other imaging modality: OCT, CT, MR...**

# Thank You For Your Attention!
