

Myocardial Disease

Division of Cardiology, Gangnam Severance Hospital,

Yonsei University College of Medicine

Eui-Young Choi, MD

Role of echocardiography for the diagnosis, hemodynamic evaluation and monitoring of treatment effects in various cardiomyopathies is crucial. Especially, systolic and diastolic myocardial functional assessment is mainly dependent on echocardiography. In this session I will show several cases with myocardial disease which is benefited by echocardiography. In addition, by providing information of CMR, biomarkers, genetics and tissue pathology, every physician would understand underlying pathophysiology of each cardiomyopathy.
