376	350	243	191	149	118	93	58	44	25	12

High Efficiency Safe Ablation Catheter

Open Irrigation Tip Cath. vs. Conventional Cath. (n=203)

Hwang ES, Pak HN et al. Circ J. 2010; 74(4):644-9.

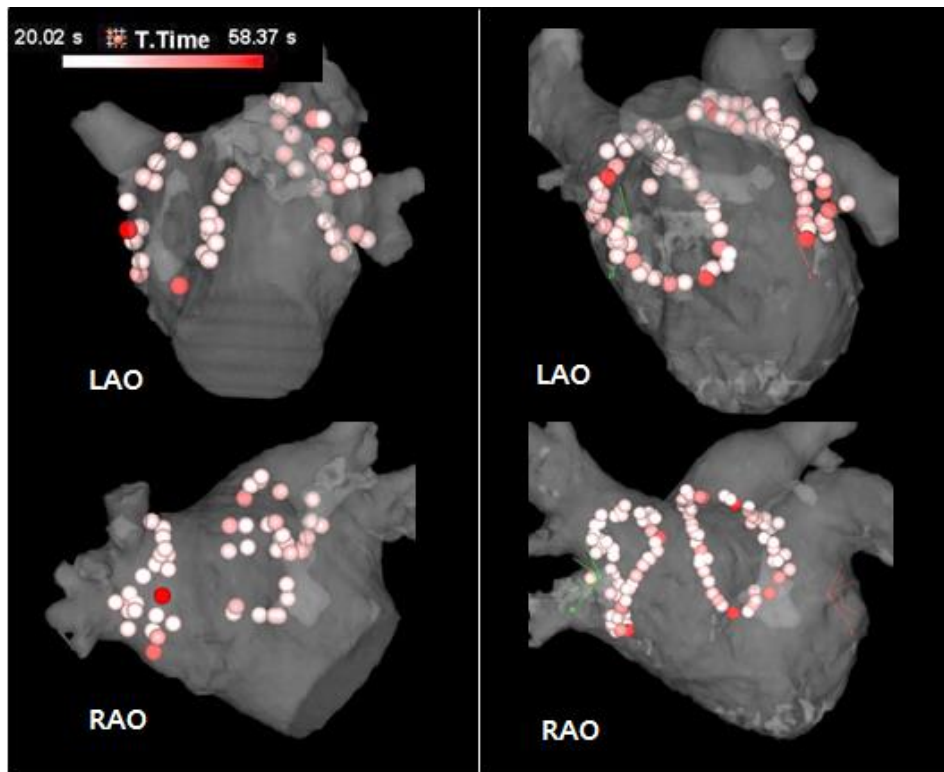

Endurance Ablation Facilitate Durable CPVI (n=603 PAF)

Yu HT, Park J, Pak HN, et al. [Unpublished Data]

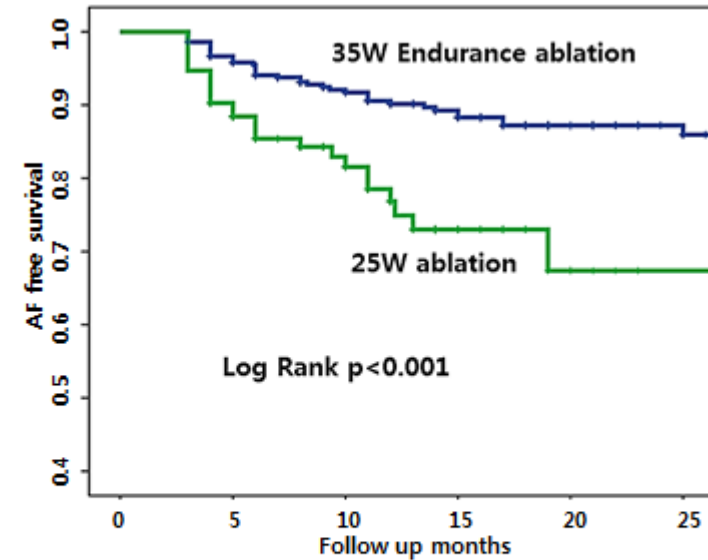

25W PVI

35W Endurance CPVI

A . 25W power ablation

B . 35W power endurance ablation

	0	5	10	15	20	25
35W Endurance ablation	360	331	238	178	99	64
25W ablation	113	88	54	21	7	4

- Similar Cx rate
- Lower recurrence ($p < 0.001$)
- Lower LF/HF ($p < 0.05$)
- Lower PVP in Redo Case (**36%** vs. 96%, $p < 0.001$)

3D Electroanatomical Mapping

Search & Destroy Non-PV Foci

The background of the slide is a dark green ECG tracing on a grid, showing a regular rhythm with distinct P waves, QRS complexes, and T waves. The text is overlaid on this background.

Appropriate Patient Selection: Precision Medicine

Rhythm Monitoring Issues

Where did 30sec rule come from?

Subclinical AF & Stroke

ASSERT Investigators (n=2580)

TRENDS Investigators (n=2,486)

Healey JS et al. N Eng J Med. 2012;366:120-9.

Glotzer TV et al. Circ Arrhy EP. 2009;2:474-480.

- Subclinical AF: AHRE > 190 bpm for **over 6 min**
- Existence of AHRE increased
- Risk of stroke: **HR 2.50**, 95%CI 1.28~4.89, p=0.008
- Clinical AF: **HR 5.56**, 95%CI 3.78~8.17, p<0.001

Table 2. TE Rates for the Overall Study Group (Unadjusted)

AT/AF Burden Subset	Annualized TE Rate (95% CI), %	Annualized TE Rate Excluding TIAs (95% CI), %
Zero AT/AF burden	1.1 (0.8–1.6)	0.5 (0.3–0.9)
Low AT/AF burden (<5.5 h)	1.1 (0.4–2.8)	1.1 (0.4–2.8)
High AT/AF burden (5.5 h)	2.4 (1.2–4.5)	1.8 (0.9–3.8)

Table 3. Hazard Ratios for Thromboembolic Events Associated With AT/AF Burden Adjusted for Stroke Risk Factors and Antithrombotic Therapy

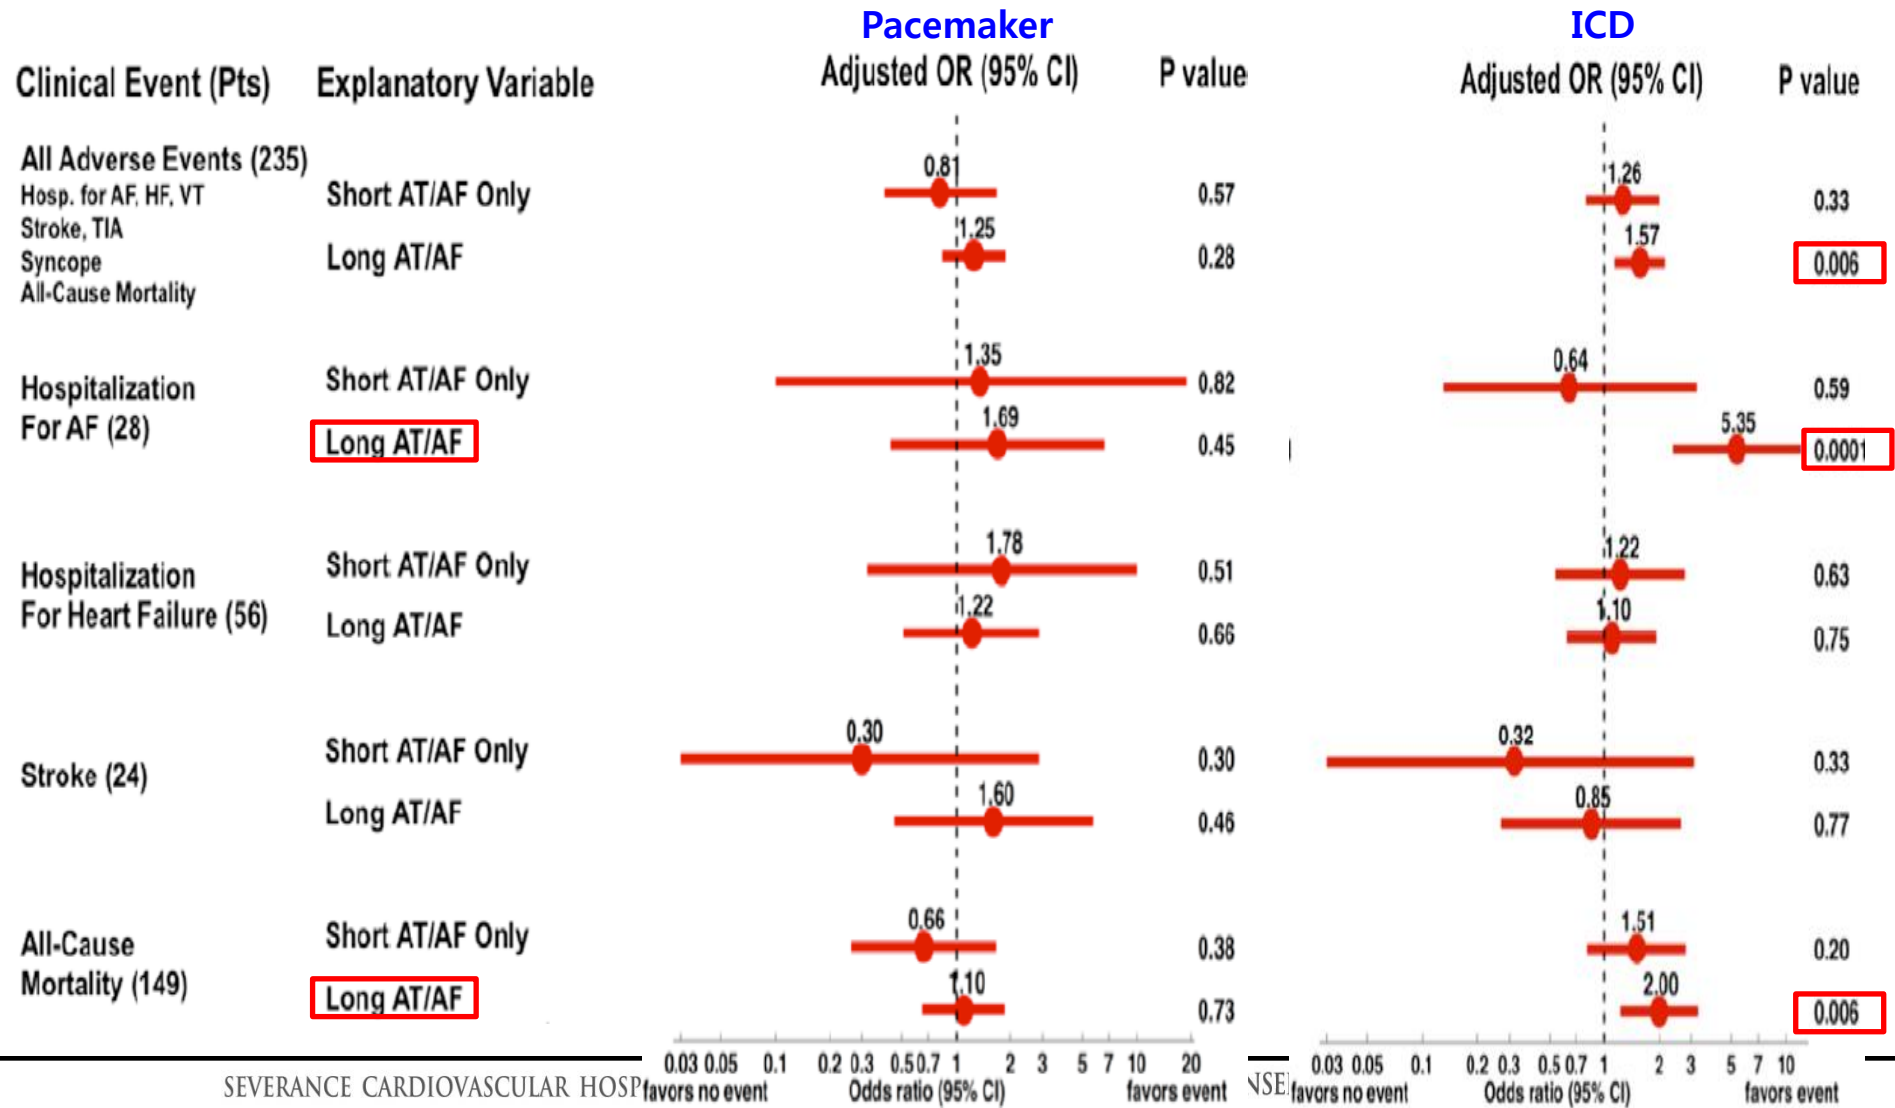

Category	Variable	Hazard Ratio (95% CI)*	P Value
AT/AF burden	Low burden vs zero burden	0.98 (0.34, 2.82)	0.97
	High burden vs zero burden	2.20 (0.96, 5.05)	0.06

Rhythm Follow-up Protocols

2012 HRS/EHRA/ECAS Expert Consensus Statement

Calkins et al. Heart Rhythm 2012;9:634-696

Minimum Follow-up
Screening for
Paroxysmal AF
Recurrence

For paroxysmal AF, the minimum follow-up screening should include: (1) 12-lead ECG at each follow-up visit; (2) 24-hour Holter at the end of the follow-up period (eg, 12 months); and (3) event recording regularly and at the time of symptoms with an event monitor from the end of the 3-month blanking period to the end of follow-up (eg, 12 months).

Minimum Follow-up
Screening for
Persistent or
Longstanding AF
Recurrence

For persistent and longstanding persistent AF, the minimum follow-up screening should include: (1) 12-lead ECG at each follow-up visit; (2) 24-hour Holter every 6 months; and (3) symptom-driven event monitoring.

Yonsei AF Ablation Cohort

Duration of Holter & Detection of Recurrence

EHRA European Survey (n=1410)

Dagres, Hindricks, et al. Int J Cardiol. 2010;139(3):305-6.

Type of ECG Monitoring

EHRA European Survey (n=1410)

Arbelo, et al. Eur Heart J. 2014;35:1466-78.

Table I Clinical information at follow-up by European region

	Western (n = 681)	Eastern (n = 194)	Northern (n = 99)	Southern (n = 415)	P-value	Total (n = 1300)
Type of follow-up at 12 months (%)					<0.0001	
Clinical visit	52.6	65.2	36.6	68.5		58.2
Telephone contact	47.5	34.8	63.4	31.5		41.8
At least one ECG during follow-up	82.7	94.4	81.5	92.2	<0.0001	87.2%
Type of ECG monitoring (%)						
Electrocardiogram	73.5	83.0	76.1	78.5	0.0409	76.6
Holter monitoring	46.4	55.6	40.9	64.4	<0.0001	52.9
Transtelephonic monitoring	1.0	20.2	0	15.8	<0.0001	8.4
Implanted-monitoring systems	2.8	1.6	3.2	8.5	<0.0001	4.5
ECG + multiday recording	43.8	65.9	38.8	65.6	<0.0001	53.3
None	22.5	14.4	21.5	13.5	0.0012	18.5

Meaning of Early Recurrence?

Park J, Pak HN, et al. J Am Heart Assoc. 2014;3(5):e001277.

	Univariable			Multivariable		
	HR	95% CI	p	HR	95% CI	p
Male	1.011	0.574-1.780	0.970	1.033	0.458-2.327	0.938
Age	1.014	0.992-1.036	0.209	0.970	0.942-0.999	0.046
Persistent AF	2.042	1.248-3.344	0.005	2.251	0.914-5.546	0.078
BMI	0.959	0.877-1.048	0.353			
LA volume index (3D-CT)	1.010	1.000-1.021	0.059	0.996	0.979-1.013	0.613
Mean LA voltage	0.464	0.269-0.802	0.006	0.326	0.149-0.714	0.005
Ablation time	1.000	1.000-1.000	0.148			
Sinus node dysfunction or 1AVB	0.735	0.495-1.092	0.127	0.843	0.510-1.396	0.507
Early recurrence	3.698	2.254-6.068	<0.001	5.725	2.784-11.771	<0.001
PR interval (Quartile)	1.429	1.129-1.809	0.003	1.969	1.343-2.886	0.001

Conclusion

- ✦ Long-lasting CPVI is essential in AF ablation, but long-term outcome is not satisfactory.
- ✦ AF is a progressive systemic disease and control of metabolic factors is important.
- ✦ Precision medicine based approach (genetics and modeling) might be helpful.
- ✦ There is no consensus for rhythm monitoring strategy, but 30 sec rule should be kept for future comparisons.
